

## **For Immediate Release**

### **Spinner North America's Game-Changing CNC Machines at 2024 SHOT Show**

Las Vegas, NV - At the 2024 SHOT Show, Spinner North America (Booth# 43160) is set to demonstrate a trio of CNC machines that redefine efficiency and precision in gun and armament manufacturing. If you machine complex components with multiple operations, you need to see how Spinner can deliver finished parts, fast in just one machine.

First up, the MICROTURN LTBS. Think of it as a Swiss Army knife of machining: it turns, mills, and does so with the kind of precision that makes a watchmaker nod in approval. It's not just a machine; it's a productivity powerhouse condensed into a sleek, space-saving form.

Then there's the TTS TRIPLEX. Picture three independent turrets cutting in perfect choreography. This machine doesn't just multitask; it's like having a team of machines, all working in concert on a single piece.

New to 5-sided machining? The U5-630 5-axis vertical machining center is a great platform for those just starting out. This machine brings 5-axis versatility to your shop without eating up your space or budget.

So, why Spinner at SHOT Show? We make complex parts, complete in one CNC. Join us to see machining innovation in action.
